

## Alpha HydroMAID

The Alpha HydroMAID is a self-contained battery operated automatic dilution cleaning system designed for animal care facilities that need the portability of a mobile unit. Its low flow rate (0.5gpm) and the low pressure spray (40 psi or 100 psi) allows you to apply KennelSol® and OdorPet® as well as degreasers and adjuvants to surfaces where flooding from your regular hose or high pressure sprayer may present a problem. Stop moving the dirty mop bucket from suite to suite or around play areas and indoor runs! The Alpha HydroMAID will assure you of increased disease control, since KennelSol is never mixed with dirty water. Also, due to its low pressure application with no splash back, pathogens will not become airborne as with many high pressure cleaning systems. You can now apply OdorPet® automatically diluted and conveniently to your indoor and outdoor surfaces. There are no hoses or electrical cords to drag around so you can take it anywhere! The Alpha HydroMAID is engineered for easy mobility over outdoor terrain for applying OdorPet to pea gravel and artificial grass play areas. Low flow/ low pressure cleaning means less product and water consumption for greater economy in maintaining your facility. Also, there is no employee handling of product concentrates providing for increased safety and additional cost savings. A cleaning accessory kit, 15' extension hose and foaming sprayer attachment are also available as additional options.

### MAID for Each Other

The Alpha HydroMAID system allows you to apply KennelSol® (a broad spectrum germicidal cleaner) and OdorPet® (an odor counteractant and cleaner), as well as degreasers and adjuvants to surfaces where flooding from your regular hose or high pressure sprayer may present a problem.

## Green Programs: The Common Thread

For a variety of reasons, not the least of which is heightened awareness and concern about emerging diseases, the Green movement sweeping the world is gaining momentum within the Animal Care Industry.

In increasing numbers, facility managers are designing Green Cleaning programs and doing so with the growing industry awareness to the many benefits. A common thread running through these programs involves an investment in highly advanced, touchless automated cleaning systems.

The commercial availability of these systems couldn't come at a better time. New York and Illinois recently passed legislation requiring public schools to adopt Green Cleaning programs. Numerous other jurisdictions have also begun incorporating environmental goals into their operational and strategic business plans, believing that:

- *Automated cleaning systems are the best way to curb potentially deadly disease outbreaks in animal care facilities and simultaneously improve overall animal health*
- *Similar legislative mandates will eventually come to their states (and so why not take a proactive position?)*
- *Going Green is the socially responsible thing to do*

The Greening of America is a multi-faceted movement that will ultimately touch organizations of all sizes, in all states, in cities large and small. The Cleaning of America is one facet of this movement. Where do you stand? Is you're animal care facility making the investment?

## Touchless Technology: State-of-the-art Cleaning System

Touchless automated cleaning system technology is an ideal *Green* cleaning solution for creating cleaner settings for both animals and workers.

The Alpha HydroMAID is the mobile automated integrated diluter of choice for touchless cleaning of small- to mid-size kennels, veterinary facilities, animal shelters or pet shops that require daily attention. Perfect and proven not just for animal care, but for all types of facilities.

### HydroMAID Features and Benefits

- Large 12-gallon freshwater tank for longer run-time between fills
- Easy-access freshwater tank drain
- Integrated chemical holders
- Capable of dispensing up to 4 cleaning products
- Storage compartments and retaining clips for deck brush and paper products, etc.
- For added safety, integrated hose hanger conveniently wraps hose when not in use
- 15-foot discharge hose allows for wide cleaning range without moving cart
- Two spray nozzle patterns:
  - Fine (rinse)
  - Coarse (spray)
- Accurately and quickly apply single cleaning products at multiple dilution ratios
- Double the operating performance with the dual-battery option
- Designed especially for dispensing Alpha Tech Pet, Inc. products

### Now, with HydroMAID you can:

The Green movement sweeping the world is now gaining momentum within America's animal care facilities.

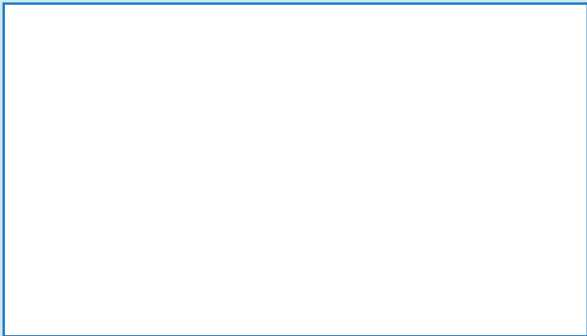

In increasing numbers, facility managers are designing Green Cleaning programs and doing so with growing industry awareness to the many benefits.

What's driving these programs?

What is the common thread running through these programs and what are the benefits?
